I have implemented the sound effect! Now, when you answer correctly, the browser will speak "Benar" (Correct).

Please try it out and let me know if you can hear it. Note that some browsers might require you to interact with the page (click around) before allowing audio to play.

oky tambahkan sedikit lagi juga ketika salah sound/suaranya "salah", dan sy ingin menambahkan di bagian awalnya itu ketika pengguna masuk / membuka website ini, sambut dia "selamat datang di game coding disini logikamu diuji menggunakan suara cewek tapi kayak di ruang guru itu loh

> Thought for 19s

**Adding Additional Voiceovers (Wrong Answer & Welcome)**  
I am planning the addition of a "Salah" sound effect and a welcome message with a specific "Ruangguru-style" female voice. I will update the task list and implementation plan accordingly.

oky sekarang, sebelum masuk pilih tingkat kesulitan berikan juga pilihan bahasa pemrogramannya diantara html,css,js,python,java..dan itu masing-masing punya soal tersendiri,dan ada juga pilihan soal acaknya kalok bisa

> Thought for 5s

**Exploring Codebase for Language Selection Feature**  
The user wants to add a language selection step (HTML, CSS, JS, Python, Java, Random) before the difficulty selection. I am starting by exploring the current codebase to understand how to integrate this structure.

Progress Updates

Expand all

1 Reading data.js and script.js to understand current question structure and game flow.

**Planning Language Selection Feature**  
I have explored the codebase and identified that I need to 'tag' the questions in **JS data.js** with their respective languages and add new questions for Python and Java. I also need to update the UI flow in **index.html** and **JS script.js** to insert a language selection step before difficulty selection.

dibagian about github itu taruh kan sy link supaya bisa dibuka

> Thought for 6s

#### Updating About Link

I have updated the 'About' link in `</> index.html` to point to the GitHub repository and pushed the change to GitHub.

Files Edited

`</> index.html`

Progress Updates

Expand all <

- 1 Updating the 'Tentang' link in `index.html` to point to the GitHub repository.
- 2 Pushing the updated link to GitHub.
- 3 Verifying and notifying user.

Link "Tentang" di menu navigasi sudah saya ubah. Sekarang jika diklik, akan membuka halaman repository GitHub game ini (<https://github.com/baiqsafirafira-hue/game-coding>).

Perubahan ini juga sudah saya push ke GitHub.

`</> index.html`

Open

buatkan sy deskripsi singkat tentang game ini

> Thought for 1s

#### Creating Game Description

I have drafted a short description for the game. I will now present it to the user and offer to create a `README.md` file since one does not exist.

Progress Updates

Expand all <

- 1 Checking for existing `README.md`
- 2 Proposing game description and `README` creation.

Berikut adalah deskripsi singkat untuk GameCoding yang bisa Anda gunakan (misalnya untuk README di GitHub):

**Judul:** GameCoding - Asah Logika Pemrogramanmu

**Deskripsi:** GameCoding adalah permainan edukasi interaktif berbasis web yang dirancang untuk menguji wawasan dan logika pemrograman. Dengan antarmuka modern yang futuristik, pemain dapat belajar sambil bermain melalui berbagai tantangan yang mencakup bahasa HTML, CSS, JavaScript, Python, dan Java.

**Fitur Utama:**

- **Kuis Logika:** Jawab pertanyaan seputar konsep dasar pemrograman.
- **Tebak Logo:** Uji pengetahuan visualmu terhadap logo teknologi populer.

• Tulis Kode: Latih keterampilan penulisan sintaks kode.
